CANINE GENETIC SCREENING CLINIC

Sunday, August 22, 2021, 11am – 4pm

**Preemption Veterinary Clinic
1706 Hwy 67
Preemption, IL 61276
Ph. 309-534-8112**

Paperwork procedure:

1. Fill out a separate form for each type of procedure; include phone number and breed on EACH form!
2. All procedures must be scheduled and paid for in advance.
3. Upon receipt of your paperwork and check, we'll send you an email with your exact appointment times. Every effort will be made to group your appointments at the various stations close together. Checks for the various procedures may be combined and made payable to the Scott County Kennel Club.
4. OFA is continuing their special. We will have stickers available to allow you to register each procedure at OFA for half price. In some cases, you may have to make a separate check out to OFA as well; please read their instructions.
5. All forms require AKC (or other) registration name and number, as well as reg. #'s of sire and dam. Some procedures now oblige you to include a copy of the actual registration slip with the OFA form and check. Please bring several copies of your dog's registration slip so all paperwork can be completed.
6. Positive identification is preferred for all procedures and required for some (ACVO/CERF). You can have your dog microchipped at the clinic. If your dog is already chipped, we will have a universal scanner available to read the ID number. If your dog has a foreign chip, please bring your own reader.
7. **We will be unable to mail CERF forms in advance as we have in the past.**
8. Directions are below; please save this front page after filling out forms.

Send completed forms and checks by August 1st, 2021 to:

**KAREN POWDER
19121 12th Ave. N.
East Moline, IL, 61244.
(309) 496-2241**

CARDIAC SCREENING

Screens will involve stethoscopic auscultation by the veterinarian Dr. Dawn Bromley, Veterinary Clinic, Preemption, Illinois.

OFA forms will be available for certification:

Dogs over 12 months that are found to be normal can be registered with OFA for a fee of \$15 (price will be reduced to \$7.50 with sticker).

If you wish to register with OFA you will need to send the form directly to OFA with your check made out to OFA!

OFA cardiac certification will indicate the age at evaluation. It will also include OFA certification indicating who performed the evaluation: Cardiologist, Internist, or General Practitioner. This year, the tests will be performed by a General Practitioner. Dogs that are found to have congenital heart disease can be registered with OFA at no charge. Dogs that are found to be abnormal by auscultation can be referred for follow-up to a facility that offers echocardiography, Doppler cardiac ultrasound, etc. to complete a specific diagnosis (between innocent murmurs and potentially serious hereditary heart diseases).

MICROCHIP PLACEMENT

One of the ways to comply with AKC's identification requirement is the microchip. Placement is as quick and easy as getting a vaccination. The chip is injected subcutaneously at the top of the shoulder blades. We will be using the AKC chips (readable with a Universal or Avid reader). We will have a universal scanner with us that can read most types of microchip, except foreign. **The fee will be \$25**, and will include placement of the chip, visualization of the number by scanner, a collar tag and bar code sticker and the form for AKC.

Registration with AKC would be extra and that check should be forwarded **directly to AKC**.

ORTHOPEDIC PROCEDURES

PALPATION FOR PATELLAR LUXATION (slipped kneecaps):

Patellar luxation is a common and potentially crippling disorder in many breeds of dogs (both large and small!). A veterinarian can identify the condition and its severity through manual manipulation of the stifle joint. OFA has a patellar registry and will register dogs that are found normal at over 12 months of age. Dr. Dawn Bromley will be doing the evaluations. Fee will be **\$15** per dog, or a litter rate of **\$8**/dog for one owner bringing 3 or more dogs. OFA forms will be signed after the exam and the **owner** can send them in with the appropriate fees to OFA. Remember, OFA fee will be only \$7.50/dog with a sticker.

BLOOD DRAWS

Thyroid Disease:

Hypothyroidism is a common disorder in many dog breeds. The problem has been to differentiate between the inherited form (autoimmune thyroiditis, also called Hashimoto's Disease) and other types of non-hereditary low thyroid conditions. There is now a specific test panel, which not only recognizes normals, but also can distinguish between Hashimoto's and other types of hypothyroid conditions. This panel (which actually consists of three specific tests (free T4 by dialysis [fT4d], Thyroglobulin autoantibody [TgAA], and canine Thyroid Stimulating Hormone [TSH]) is only done at the Vet School laboratories at Michigan and Cornell. Dogs that do not have Hashimoto's can be registered through OFA 's Thyroid Registry. At the clinic, OFA forms will be filled out, blood will be drawn, the serum separated, and the samples sent to Michigan. Results will be sent to the owners. Fee for the new Thyroid Test will be **\$100.00** (which includes the blood draw, separating and shipping, the lab fees). A separate check to OFA will be required (at half the price listed on their form). Dogs that do not pass the thyroid test will have their OFA fee returned.
